EDUCATION

Arizona State University

B.S., Computer Science (Data Science Minor)

Aug 2022 - May 2026

Tempe, Arizona

- **GPA:** 3.8
- **Coursework:** Data Visualization, Exploratory & Analysis of Environmental Data, Data Structures and Algorithms, Operating Systems, Database Management, Software Engineering, Foundations of Machine Learning, Applied Linear Algebra, Probability and Statistics

TECHNICAL SKILLS

- **Programming Languages:** Python, R, SQL, HTML/CSS, Bash, Java
- **Tools and Environments:** Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, Jupyter Notebook, Matplotlib, AWS, Linux, Git, Docker, Power BI, Tableau, Databricks, Spark, Tableau Prep, Claude Code, PostgreSQL

EXPERIENCE

Food Forest AI

Jun 2025 - Jul 2025

Jr. Data Analyst Intern

Philadelphia, PA

- Built Python (Pandas + regex) pipelines to standardize 500+ B2B company records; cut manual cleanup by ~75% and improved downstream match rates.
- Implemented SQL checks to surface duplicates, null values, and schema drift, which increased ingestion reliability and reduced cataloging errors
- Authored targeted web-scraping scripts to enrich missing fields (websites, bios, social links), lifting dataset completeness by ~55%.

ASU Social Embeddedness (Office of University Affairs)

Sep 2024 - May 2026

Community Engagement Data Input Specialist

Tempe, AZ

- Administered the Collaboratory platform, to manage, validate, and standardize university-community engagement data, which improved data accuracy and consistency for reporting across the university
- Automated workflows and delivered Tableau/Power BI dashboards, while leading demos and technical support sessions that increased platform adoption across ASU units.

DigiClips (Capstone)

Aug 2025 - May 2026

Database & Analytics Developer

Tempe, Arizona

- Developed MySQL-based relational data workflows for high-volume processed media and transcript datasets, enabling scalable search, reporting, and operational analytics.
- Developed MySQL-based relational data workflows for high-volume processed media and transcript datasets, enabling scalable search, reporting, and operational analytics.
- Improved query performance and data reliability through schema normalization, indexing strategies, validation workflows, and automated cleanup and retention processes.

PROJECTS

SaaS Revenue & Churn Intelligence Platform | [Deployed Project](#)

- Built a SaaS revenue and churn intelligence platform using Python, PostgreSQL, SQL, and Streamlit to analyze MRR, churn, cohort retention, and customer health across 50K+ simulated B2B SaaS records.
- Designed analytics-layer SQL models and materialized views for revenue movement tracking, retention analysis, churn-risk segmentation, and SaaS KPI reporting, including NRR, GRR, expansion MRR, and cohort-based retention metrics.
- Developed interactive executive dashboards with Streamlit and Plotly to visualize revenue trends, churn drivers, customer lifecycle behavior, and operational risk signals using realistic synthetic billing and product-usage data.

AI Job Market Intelligence Dashboard | [Live Dashboard](#)

- Built an interactive analytics dashboard exploring global AI job market trends, salary patterns, hiring difficulty, and workforce dynamics using modern data visualization techniques.
- Designed multi-view visualizations including salary distributions, experience-to-compensation analysis, country-level hiring insights, and parallel coordinates exploration for workforce analysis.
- Implemented coordinated filtering and interactive analytical workflows to surface insights across 90K+ AI job market records spanning industries, countries, roles, and AI specializations.

Enterprise Lakehouse ETL Pipeline

- Built an end-to-end ETL pipeline using Databricks and Spark to consolidate multi-source FMCG retail data into a lakehouse architecture.
- Designed fact and dimension tables with incremental loading to support scalable analytics and historical tracking.
- Implemented data transformations and business logic to produce analytics-ready datasets for reporting and BI dashboards.
